Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 to 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuoka et al. (U.S. Patent No. 6,696,732) and Chappell et al. (U.S. Patent No. 5,541,427).

Matsuoka et al. show most aspects of the instant invention (e.g. Figure 23) including:

- an active region **14** with a gated device **14c** in an SRAM cell (Column 10 Lines 9)
- a dielectric layer comprising a conformal silicon nitride etch stop **20a**, a planarized first dielectric layer **20b**, a second etch stop layer **42** and a second dielectric layer **26**
- first to fourth contacts **44,46** which either go through the dielectric layer and either stop at the etch stops or go to the gate **14c** and a junction region **14a,b**

Matsuoka et al. does not show the dielectric layer having a first thickness over the gate and a second thickness greater than the first thickness adjacent to the gate. Chappell et al. teach (e.g. Figures 3 and 4) to have a dielectric layer **32,34** (made of essentially three layers of etch top materials) with a first thickness (i.e. layer **32**) over a gate **18** and a second thickness (i.e. layers **32,34**) greater than the first thickness

adjacent to the gate (i.e. over junction region **31**) to help provide a small SRAM cell (Column 1 Lines 45 and 46) and to protect the underlying diffusion regions (Column 4 Lines 17 to 20). It would have been obvious to a person of ordinary skill in the art at the time of invention to have a dielectric layer with a first thickness over a gate and a second thickness greater than the first thickness adjacent to the gate as taught by Chappell et al. in the device of Matsuoka et al. to help provide a small SRAM cell and to protect the underlying diffusion regions.

Response to Arguments

3. Applicant's arguments with respect to Claims 1 to 10 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

4. Paper copies of cited U.S. patents and U.S. patent application publications will cease to be mailed to applicants with Office actions as of June 2004. Paper copies of foreign patents and non-patent literature will continue to be included with office actions. These cited U.S. patents and patent application publications are available for download via the Office's PAIR. As an alternate source, all U.S. patents and patent application publications are available on the USPTO web site (www.uspto.gov), from the Office of Public Records and from commercial sources. Applicants are referred to the Electronic Business Center (EBC) at <http://www.uspto.gov/ebc/index.html> or 1-866-217-9197 for information on this policy. Requests to restart a period for response due to a missing U.S. patent or patent application publications will not be granted.
5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

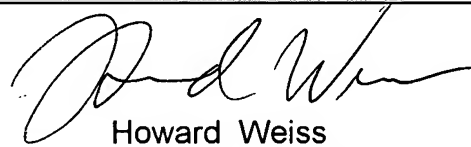

6. Papers related to this application may be submitted directly to Art Unit 2814 by facsimile transmission. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The Art Unit 2814 Fax Center number is **(703) 872-9306**. The Art Unit 2814 Fax Center is to be used only for papers related to Art Unit 2814 applications.
